

M House Image Spec

Placeholder shot list and export sizes. Prepared 9 October 2026 by measuring the real rendered size of every slot at desktop (1440px) and mobile (375px).

How to read this

- **Export size** is already 2× the largest displayed size, so images stay crisp on retina and high-DPI screens. Prepare at the size shown; do not go smaller.
- Every content image is **largest on desktop**, so the desktop size governs. The heroes are the exception: they fill the screen and must look good both wide (desktop) and tall (portrait phone), so keep the main subject **centred** with room around it.
- **Format:** JPG, sRGB colour, quality about 80. Aim for under about 400KB each (heroes can go a little higher, about 600KB). I can also batch compress on upload.
- **Filenames help SEO.** Use descriptive, lowercase, hyphenated names, for example mhouse-swim-hero-pool.jpg. The caption in each row is a good basis for the name and the alt text.
- The captions come straight from the page placeholders, so they double as the shot brief for the photographer.

Does not need a photo

- **Splash / entry screen:** branded gradient with the logo. No photo.
- **Logo** (nav, footer, splash): already set, licensed separately. Not photography.
- **Home About images** show on desktop only.

Reuse opportunities (to cut the count)

- The **3 room cards on the home page** can reuse the best room shot from each room gallery on the Stay page.
- The **home hero slideshow** can reuse your strongest hero shots from the section pages (pool, courtyard, a room, the lounge).
- Stay room galleries are set to **2 shots each** (the room and the bed). Tell me if you want a different number and I will adjust the page.
